

Westwinds Metropark Highlights

**METROPARKS
TOLEDO**

Messages for Interpretation

Westwinds Metropark offers unique recreational opportunities where visitors can be immersed in Oak Openings nature experiences.

- As part of the Oak Openings Corridor Westwinds Metropark supports mature oak woodlands, rare oak savannas, wet meadows and remnant sand prairies. Savanna and prairie restoration efforts help maintain high quality natural areas at Westwinds.
- Here visitors can experience the unique opportunities of static and 3D archery courses.
- Community partnerships with recreation and natural resource agencies came together to create Westwinds Metropark.

What's In A Name?

Westwinds Metropark is near an area known as Westwinds Industrial Park.

Natural and Human History

Opened in 2015, this small park features some excellent examples of Oak Openings Region natural communities. Mature oak woodlands and prairie remnants stand out at Westwinds. Very large individuals of sassafras, cherry and a notable variety of oaks tower in the woodland, and fine examples of Pin and Burr Oak can even be seen from Turkeyfoot Shelter. The extensive prairie restoration at this park has resulted in excellent grassland bird habitat.

Part of the Oak Openings Corridor – land between Secor Metropark and Oak Openings Preserve – Westwinds was one of the first sites purchased by Metroparks following their successful and unprecedented Metroparks Land Levy of 2002. Grants such as Clean Ohio also provided substantial funds for this and other Corridor sites. The Moseley Trail between Secor Metropark and Oak Openings Preserve will connect Westwinds to other Metroparks sites and partnering properties.

For many years prior to its opening as a Metropark, the Flying Tiger Radio Control Model Club has leased a portion of this property as a flying site for their model airplanes. The club continues to use the site today, maintaining the mowed areas and helping with trash removal.

In fall of 2016, Girl Scouts of Western Ohio were instrumental in bringing the Juliette Gordon Low Trail to this Metropark. Low was the founder of Girl Scouts, and our local chapters put many hours into clearing and cleaning the area for this nationally known trail.

Burr oak

Sassafras

Dwarf dandelion

Pennsylvania sedge

Western chorus frog

Twelve spotted skimmer

Today, Westwinds is home to two public, archery courses. The static range course allows beginners safe and efficient target practice. The 3D course lets more advanced archers try their aim at statues of not only local wildlife but also mountain goats and alligators! These archery courses were made possible thanks to support from the Ohio Department of Natural Resources, Bass Pro Shops, and the National Wild Turkey Federation. Westwinds is a seasonal park, generally opened April to mid-November.

Plant Life (* = State-listed as rare)

Trees vines and shrubs include:

Burr oak	Pin oak
Black oak	Sassafras
Black cherry	Catalpa
Red mulberry	Black walnut
Eastern cottonwood	Gray dogwood
Virginia creeper	Greenbrier
